Claim 27, the thickness of the first insulating layer is unclear. Furthermore, in the 3^d working step "activating a layer selected from the group consisting of the first insulating layer and the second insulating layer" is vague and indefinite, it is unclear how the activation would be carried out to the first insulating layer (if 1st insulating layer was chosen) after having a second insulating layer has been applied thereover. Due to these reasons, the process claims can not be rejoined.
